

SUMMARY

GenAI engineer specializing in RAG systems, agentic workflows, LLM evaluation, and production AI delivery. Experienced designing role-based access controls, resilient multi-tier fallback architectures, and automated quality/security test suites for AI products that need to hold up outside a demo.

CORE TECHNICAL SKILLS

|                        |                                                                                          |
|------------------------|------------------------------------------------------------------------------------------|
| Languages & Frameworks | Python, FastAPI, React 19, TypeScript, PyTorch                                           |
| AI / GenAI             | Gemini, LangChain, CrewAI, RAG pipelines, prompt & context engineering, RAGAS evaluation |
| Data & Infra           | ChromaDB, DuckDB, SQL, MySQL, Docker, Docker Compose, Azure ML                           |

FEATURED PROJECTS

FinSight — Enterprise AI Workspace2026

- Built a dual-engine RAG + Text-to-SQL system that routes each query to grounded document retrieval, structured SQL analytics, or a safe fallback.
- Designed 6 protected roles with department-level data isolation enforced before any LLM call.
- Shipped an automated 34-check quality and security evaluation suite using RAGAS.

FastAPI · React 19 · ChromaDB · DuckDB · RAGAS · Docker Compose

Factscope AI — Claim Verification Platform2026

- Built a news claim-verification pipeline that decomposes articles into atomic claims and returns confidence-scored verdicts against live sources.
- Designed a 3-tier fallback engine (Gemini → Google Search → 24h cache) to stay online through model or quota outages.
- Shipped both web and desktop (Electron) surfaces from one codebase.

Gemini · Google Search API · Electron · Express · Serverless
