

SUMMARY

GenAI engineer specializing in RAG systems, agentic workflows, LLM evaluation, and production AI delivery. Experienced designing role-based access controls, resilient multi-tier fallback architectures, and automated quality/security test suites for AI products that need to hold up outside a demo.

CORE TECHNICAL SKILLS

Languages & Frameworks	Python, FastAPI, React 19, TypeScript, PyTorch
AI / GenAI	Gemini, LangChain, CrewAI, RAG pipelines, prompt & context engineering, RAGAS evaluation
Data & Infra	ChromaDB, DuckDB, SQL, MySQL, Docker, Docker Compose, Azure ML

FEATURED PROJECTS

FinSight — Enterprise AI Workspace2026

- Built a dual-engine RAG + Text-to-SQL system that routes each query to grounded document retrieval, structured SQL analytics, or a safe fallback.
- Designed 6 protected roles with department-level data isolation enforced before any LLM call.
- Shipped an automated 34-check quality and security evaluation suite using RAGAS.

FastAPI · React 19 · ChromaDB · DuckDB · RAGAS · Docker Compose

Factscope AI — Claim Verification Platform2026

- Built a news claim-verification pipeline that decomposes articles into atomic claims and returns confidence-scored verdicts against live sources.
- Designed a 3-tier fallback engine (Gemini → Google Search → 24h cache) to stay online through model or quota outages.
- Shipped both web and desktop (Electron) surfaces from one codebase.

Gemini · Google Search API · Electron · Express · Serverless

AI Code Review Agent — Autonomous PR Review Platform2026

- Built a multi-agent PR reviewer where deterministic static analysis (Semgrep, Bandit, AST call-graph, codified governance rules) runs first at zero LLM cost and escalates to a Senior Developer, Security Engineer, and Tech Lead crew only when warranted.
- Designed a sandbox verification step: every proposed defect gets a generated pytest regression test executed in an isolated subprocess, with the actual exit code — not model confidence — deciding the evidence badge.
- Shipped an MCP server (5 tools) for in-editor use, a reusable GitHub Action, SARIF v2.1.0 export, and a 14-case ground-truth benchmark suite scoring 100% verdict accuracy.

CrewAI Flows · Gemini · FastAPI · Semgrep · React 19

EXPERIENCE & EDUCATION

2024	Data Science Intern Advanced Telecom Services · ATS AI Lab - Analyzed roughly 1,000,000 NOAA lightning-strike records for feature engineering, predictive modeling, and visualization. - Communicated technical findings to stakeholders to inform downstream decisions.
Graduated 2026	BS Computer Science Abbottabad University of Science and Technology
